

Your ideas. Your voice. More ways to use them.

A practical guide to turning one useful piece into content that sounds like you, looks like you and gives you less to create from scratch.

Build Your Content System · 14 October 2026

Kelly Hartley · Wise Women Use AI

Your ideas can do more work

You know your subject. Finding another hour to turn it into content is often the harder part. This kit helps you repurpose a useful piece you already have. Show AI who you are talking to, how you write and what your content looks like. Then choose an email, article or recording and ask it to make useful new versions. The aim is less starting from scratch. A small bank of approved content can keep going out while you're busy with clients or taking time away. It still needs a person to check it and a working publishing process. Useful content gives people more chances to understand how you think. A relevant invitation can then bring them onto your email list, where you can keep the conversation going. Posting alone does not guarantee trust, subscribers or sales.

The whole content system

Think of briefing a new employee. You would show them an example of good work, explain who it is for and give them a clear job. Give AI the same starting information. The comparison helps you write the brief; it does not mean AI understands your business like a person. You still check what comes back.

After the workshop, choose one source piece, an AI chat you can access and examples of your own writing. Nothing is required before attending. A photo you have permission to edit is optional. Use a document if you do not have Notion. The whole system is your knowledge → a substantial source → a content waterfall → consistent images and video → preparation and publishing → learning for the next cycle. Your voice and visual reference guide every step. An interview can help create the source when you need it. Choose the branches that help your audience; there is no fixed output quota. Use your existing planning document or content table. Keep the source link, approved version and status with each piece. If you do not have a system yet, a simple document is enough.

1. Show it how you speak

“Make it sound like me” leaves a lot to guess. Give it two or three examples you like. Point out the everyday words you use and anything you would never say. This becomes your voice reference: a short note about how you write.

Read these examples of my own writing or transcribed speech: [examples].
Describe the voice you can actually observe: sentence length, everyday words, how I explain things, how direct I am, humour and phrases I would avoid.
Show evidence from the examples. Do not invent personality traits.
Create a one-page voice reference with five practical writing rules.
Separate established habits from suggestions. Ask me to correct the reference.
For every future draft, preserve my meaning and uncertainty. Do not invent my experiences, customer stories, results, credentials or quotations.

Keep a sentence you like and a sentence you would never say. Those examples are often more useful than “warm and authentic”.

2. Show it what your content looks like

Your colours

Your fonts

Your knowledge can go further

Everyday words. Easy to read.

Your photo style

Think of this as a note showing how your business communicates. Keep your colours, fonts and a photo treatment you like together. Add the writing examples from the previous page. The prompt calls this a Content Style file. It is simply a document you can reuse, not another tool to learn.

Help me make a reusable Content Style file.

Ask about one area at a time: existing fonts and colours; examples I like and what I like about them; how I want photos to feel; caption readability; video pace; framing; covers; graphics; music; and things I dislike.

Use the brand files I provide. If I have no settled fonts or colours, offer a simple provisional option and label it as a suggestion.

Return a plain document containing:

- audience and purpose
- voice rules and approved examples
- font names, available files and fallbacks
- exact colour values from my supplied brand source
- photo treatment, identity and context rules
- video framing, cuts, captions, text placement and sound rules
- cover and carousel rules
- what to avoid
- approval checklist, version and date.

Do not claim a saved file is automatically installed in every AI tool.

Show how to paste or attach it to my next brief. Keep it portable.

Test the file on one piece. Correct it before making a batch. If your tool supports reusable instructions, you can later turn the approved file into a skill using that tool's supported setup.

3. Choose something you have already made

Start with a useful article, newsletter, recording transcript or written explanation you already have. Check that it contains a clear point, a specific example and any important limits. This is your original piece. Keep it beside the new versions so you can check the meaning has stayed the same. Some prompts call this the anchor. Do not create another long piece if the existing one is sufficient. Use the prompt below only if the source needs shaping before repurposing.

Use only the approved source piece and voice reference.
Create one [newsletter / article / long-form video script] for [reader].
Its job is to help them understand [one point] and take [one useful action].
Use a specific opening grounded in my source. Develop the idea with the example I actually gave. Include relevant limits. End with one appropriate next step: [approved resource or offer].
Draft for [chosen length]. Do not stretch thin source material.
After the draft, provide an internal source check: each factual claim or personal example mapped to its source passage. Mark missing facts [CHECK].
Do not put invented experience into the first person.
Return the draft for review. Do not publish it.

Read it aloud. Correct anything that sounds unlike you. Check names, examples, numbers and the invitation. Save the approved version before making smaller pieces.

4. Build your content waterfall

One useful newsletter

Choose the branches that serve your audience. This is a map, not a quota.

Think of explaining the same idea in a conversation, an email and a short list of steps. The point stays the same. You change how you present it so it works in that place. The prompt calls this a content waterfall.

- **Newsletter:** develop the thought and invite a reply or relevant next step.
- **Article or LinkedIn piece:** explain the reasoning for readers who need more context. Adapt the opening to that audience.
- **Reel:** make one point someone can use immediately. Write for speech.
- **Carousel:** teach a short process or checklist people can save.
- **Short text post:** isolate one clear opinion and give its reason.
- **Stories:** show context, ask a useful question or show a real example.
- **Threads or X:** express one short sequence of connected ideas, only if you use the channel.

Your waterfall prompt

Use approved anchor version [version] and my voice reference.

Plan a small content waterfall for [channels] over [period].

For each piece give: audience moment, format, distinct job, source section, useful takeaway, one next step and production effort.

Choose only formats supported by the source. Omit a story if I supplied no story.

After I review the map, draft the selected branches:

- An article or long-form video script developing the reasoning.
- A short spoken Reel making one useful point, with a separate screen hook.
- A carousel explaining a practical sequence with useful detail.
- A short opinion post with its reason.
- A Story sequence or thread that starts a relevant conversation.
- An email invitation to an existing relevant resource or offer.

Do not force all formats from a source too thin to support them.

An existing newsletter can already be the anchor; do not recreate it unnecessarily.

Write fresh copy for each platform. Do not give every piece the same opening.

List any repeated points I should cut. Mark claims needing a check.

Keep everything in Draft until I approve it.

Example week: anchor on Monday; a practical carousel on Wednesday; one Reel on Friday; a short opinion or Story where it belongs. Scheduling is a separate step after approval.

Our worked example: the Wise Women waterfall

Content should not take over your week

Choose the branches that serve your audience. This is a map, not a quota.

This is a prepared demonstration based on Kelly's agreed message for this workshop. It is original draft copy, not a previously published newsletter, a verbatim interview or evidence of campaign results. The example shows the business benefit being taught: useful knowledge travelling further without starting from scratch for every format.

The source contains a recognisable problem, a clear view, a practical method and a relevant invitation. Its branches have different jobs. Use this example to see the system, then apply the prompts to your own substantial source.

The source newsletter

Subject: Before you create another piece of content

You have written a useful newsletter. Then you open Instagram and try to think of something completely different to say.

Before you start again, look at what is already there: the point you made, the example you used and the steps someone could follow.

That newsletter can be the starting point for several useful pieces. A short video might explain one answer out loud. A carousel can show the steps. A short post can share your view and why you hold it. An article gives you room to develop the reasoning for someone who needs more context.

The content needs to work in the place you are using it. Someone watching a short video needs a clear spoken point. Someone saving a carousel needs a sequence they can come back to. Repeating the same paragraph everywhere misses that opportunity.

AI can help with these adaptations when you give it your original piece, examples of how you write and a clear job. Keep the details that make the advice useful. Read the drafts together and change anything you would not say.

Your visual choices matter too. Save your fonts, colours, photo treatment and editing preferences so the pieces belong to the same business. You should not need to explain those choices from the beginning every time.

Once the pieces are checked, prepare them for the days you want to use them. That gives you content ready for a busy week, rather than another decision waiting for you each morning.

Useful content gives people a chance to understand your thinking. Where there is a relevant next step, make it clear: a resource, an email sign-up or help putting the idea into practice.

For your next batch, choose one piece you have already made. Find its useful parts before asking AI for more.

Branch 1: article or long-form video

How to turn one newsletter into useful social content

Choose a newsletter that explains one problem clearly. Mark the advice, the example and the next step. These give you several ways to help the same reader without inventing a new topic.

Choose a source with something to say. A useful source gives you a point and enough detail to explain it. A newsletter, article or recording can all work. If the thinking is still in your head, let AI ask questions and save your answers before asking it to write.

Give each format a job. A short video can explain one answer. A carousel can show a process. A short post can share an opinion and its reason. Choose the formats your audience uses, then adapt the opening and structure for that experience.

Give AI your reference. Attach the source and examples of your own writing. Add your audience and the purpose of the new piece. Keep the concrete detail that makes your advice useful. Check that your meaning has survived the rewrite.

Make the pieces recognisable. Use your existing fonts, colours and photo choices. Keep video captions and editing consistent. Save these instructions so the next batch starts with the same useful reference.

Prepare and learn. Review the batch, choose when each piece should go out and use the publishing process you actually have. Look at the replies and questions afterwards. They can tell you which part needs a clearer explanation next time.

Start by opening one newsletter. Underline its point, example and next step. Those are the raw materials for your first waterfall.

For a long-form video instead, use these five headings as a spoken walkthrough and show the source and outputs as you explain. Add your own real examples; do not read the article unchanged or invent a personal story.

Branch 2: a talking-head Reel

Screen hook: Before you write another post

“Before you write another post, open your last newsletter. Find one question you answered. Explain that answer in a short video. You already have the subject. Now make it easy to follow out loud.”

Caption: Your last newsletter may contain the next useful video. Choose one answer, keep the detail that helps and say it in words you would actually use. One clear point is enough for this piece.

Record the words naturally, then use your saved editing style. This is a script ready to record, not a claim that the video has already been produced.

Branch 3: a carousel

1. Your next post may already be in your newsletter

You do not need a different subject for every format. Give the useful parts a new job.

2. Find one useful point

What question did you answer? Keep the advice and example that made the answer helpful.

3. Choose the best format

A sequence could become a carousel. One clear answer could become a short spoken video.

4. Keep it recognisably yours

Give AI the source and your writing examples. Use your fonts, colours and photo style.

5. Check it and prepare it

Read the pieces together. Remove repetition and anything you would not say. Then choose when each should go out.

Branch 4: a short post

You do not need a brand-new idea for every post.

Someone who missed your newsletter may understand the point when you explain it in a video. Keep the useful idea. Change how you present it.

The work is deciding what helps in that format. A video might explain one answer. A carousel might show the steps. Both can begin with something you have already written.

Branch 5: Stories or a thread

Story 1: Does creating content feel like starting again every time? Use a simple response sticker if the platform supports it.

Story 2: Show the newsletter beside its Reel script and carousel. On-screen text: “One source. Different jobs.” Explain which point each piece uses.

Story 3: Which of your pieces could go further? Open a newsletter, article or recording and look for one useful explanation.

For Threads or X instead, use three connected posts: name the starting-again problem; explain the different jobs of video and carousel; invite the reader to identify a source they already have. Choose the channel you actually use, not another platform to maintain.

Branch 6: a relevant email invitation

Subject: Make your content go further

If you have useful knowledge but keep starting from scratch when it is time to post, join me for Build Your Content System.

On Wednesday 14 October, from 7 to 8 pm AEDT, I will show how one substantial piece becomes a content waterfall: articles, short videos, carousels, posts and a relevant invitation.

We will also look at keeping your voice and visual style, three treatments of the same photo and a simple talking-head video edit.

You can watch and ask questions. There is nothing to prepare.

Everyone registered gets the Content System Kit and replay. Come live and you will also get the full 15-treatment Visual Style Pack, free.

Save your free place through the workshop registration page.

Kelly

This is demonstration copy. Add the verified registration link before use. No email has been sent by creating this example.

5. Nothing written down yet?

Use this only when you do not already have a suitable article, newsletter, recording or explanation. Set your audience, voice and visual reference first. Copy this into a new chat. Answer by speaking or typing. Keep the interview and the drafts in the same conversation, or attach the saved source document when you start again.

Act as my content interviewer. Do not write content yet.

My audience is [who]. I help them with [work]. Today's idea is [idea].

Ask one question at a time and wait for my answer. Start with a real question my customer might ask about this idea. Follow my answer rather than using a fixed questionnaire. Ask for a particular example when I speak generally.

Find out what I think, why I think it, what I have actually tried, what changed, and where my advice has limits. Ask how I would explain it to a customer.

Aim for six to eight questions, but stop when we have enough for one useful piece.

Do not suggest my opinions or write a story for me.

Before drafting, ask whether I want to add or correct anything.

Then return:

- my central point, in my words
- useful phrases quoted exactly from my answers
- examples and facts, with the answer each came from
- things that need checking or permission
- gaps you cannot fill without asking me.

Label uncertain material. Do not turn a possibility into a result.

If you already have pillars, choose one. If you do not, start with one question you regularly answer. You can organise pillars later. Save the interview as your source record. Keep exact quotes distinct from summaries. Remove client identifiers before using an example publicly.

One photo, different uses

The three approved workshop treatments use the same original photo. Compare likeness and meaningful details. Creative background changes are not evidence of a different real location or event.

6. One photo, three treatments

Start each treatment from the original photo so that errors do not accumulate. These are creative directions, not guarantees that a model will preserve every detail. For all three: preserve the person's identity, age, expression, body proportions, clothing and the real setting. Keep natural skin texture. Do not invent clients, awards, signage or events. Inspect the result beside the original.

Soft editorial portrait

Edit this original photo for a calm founder introduction. Give the existing light a broad, soft quality. Separate the person gently from the background with restrained depth, while leaving the setting understandable. Keep the original crop unless a small adjustment improves balance. Preserve identity, age, expression, body shape, clothes and meaningful objects. Retain skin texture. No beauty reshaping, added text or invented details.

Direct-light social portrait

Create a crisp direct-light treatment of this original photo for a social post. Use a small frontal light feeling, a clear shadow edge and controlled highlights. Keep the scene believable and avoid shiny or washed-out skin. Preserve the person, expression, pose, clothing and actual setting. Change the lighting treatment, not the story of where I was. No added text, objects, people or cosmetic reshaping.

Quiet cinematic portrait

Edit this original photo for a thoughtful story post. Shape the light so one side is gently brighter, keep detail in the shadows and use restrained colour. Keep the real location and original expression. Add only a trace of fine grain. Preserve identity, age, skin texture, anatomy, clothing and important objects. No dramatic new scenery, artificial fog, invented activity or added text.

If the face changes, reject the result. Reduce the requested changes or keep the original. The three prompts stay in this kit for replay viewers too.

7. Give one Reel a consistent finish

A chat can create an edit brief. Producing the video requires an editing tool that can inspect and render your footage.

Use my original talking-head clip and approved Content Style file.

First confirm whether you can inspect the actual video and produce an edited file.

If you cannot, give me a clear editor handoff without claiming to have edited it.

For one short Reel, preserve the order and meaning of my words. Remove a false start or long empty pause only where the cut stays natural. Do not make me say a sentence I did not record. Keep face and voice recognisable.

Use readable captions in my available brand font, no more than two lines at once. Keep text away from my face and platform controls.

Use simple cuts, consistent framing and one opening screen hook.

Keep dialogue clear. Music is optional and must be licensed for my use.

Return a short edit plan with source timecodes, the proposed cuts, caption corrections and a cover suggestion. Then render only after I approve the plan.

Check the exported video for meaning, spelling, audio sync and phone readability.

Keep the original file. Do not publish.

Plan your first small batch

- Reader and question:
- My central point:
- Existing source location (or optional interview):
- Anchor format and approved version:
- Selected waterfall branches and the job of each:
- Voice phrase to keep:
- Visual rule to keep:
- One invitation and its destination:
- What I still need to check:
- Review date and approved publishing slots:

Keep the work moving

Think of a draft as work waiting in your in-tray. Checking it, approving it and sending it are separate jobs. Do not treat “ready” as “delivered”.

Check the next small batch when you have capacity. Give each piece a status: Draft, Needs correction, Approved, Scheduled, Published, Checked. A scheduled item is not proof it went out. After publishing, note useful replies, resource sign-ups and relevant enquiries alongside reach. Keep the time spent too. Compare a few cycles before deciding what works. The free workshop demonstrates the complete content system and one prepared waterfall so you can use the resources yourself. Architect Advantage is the implementation programme for building the repeatable process around your business, including batching, approvals, publishing, follow-up and learning from results.
